

Senior/Staff AI Product Engineer

Matt Whalley

mattwhalley.com

matt@mattwhalley.com

I help organizations untangle complex product problems and build systems that continue creating value long after implementation. Over the past decade I've done this through AI products, design systems, frontend engineering, accessibility, and digital design. While technologies have changed, the goal has remained the same: leave teams with practical tools they can trust, extend, and build upon.

EXPERIENCE

Frontend Engineering Manager, DataSpring

2022 - Present

AI product engineering, UX engineering, and technical enablement

- Shipped AI-powered provider search covering 1.6M+ providers and 674 specialties across 64 enterprise health-plan customers (12 plans) in beta, combining full-roster search, lay-language specialty matching, enriched provider data, and interactive mapping on Azure AI Foundry/Azure AI Search
- Reduced friction across engineering teams by designing and rolling out a shared AI development platform adopted by ~100 engineers across five internal and vendor teams
- Established the security and governance foundation for organization-wide AI adoption, partnering with infrastructure and security teams to enable trusted deployment across engineering, product, and vendor organizations
- Engineered multiple internal MCP servers (Azure DevOps, Okta, Figma, and others), rolled out to all engineers and adopted as the blueprint for extending AI access to non-engineering functions
- Prototyped automated healthcare provider verification querying 3 federal/industry sources (NPPES via CMS, OIG LEIE, SAM.gov) in parallel with automated change-detection and confidence scoring; concept validated and now being pursued by another team
- Established design system and WCAG accessibility standards adopted across 2 product lines; sole frontend SME for React Native app shipping to iOS and Android

Senior Digital Product Designer & Developer, Broward County Government

2014 - 2022

- Modernized public-facing digital services used by Broward County's 1.9 million residents by improving accessibility, standardizing design, and reducing long-term maintenance costs
- Designed and implemented a county-wide design system that reduced delivery time by 25% while improving consistency
- Introduced machine translation via Microsoft Cognitive Services, expanding access for non-English-speaking residents
- Trained 100+ staff in accessibility standards and CMS best practices, reducing support overhead and improving content quality

AREAS OF PRACTICE

AI Product Engineering Azure AI Foundry, Azure AI Search, MCP, Agentic Workflows, Claude Code, RAG, AI Evals, Azure AI Services

UX & Frontend Engineering React, React Native, TypeScript, Design Systems, Accessibility (WCAG)

Technical Leadership Architecture Reviews, Engineering Enablement, Cross-Functional Delivery

EDUCATION

Bachelor of Arts (B.A.) in Psychology & Technology – Florida International University

2019

Associate of Science (A.S.) in Graphic Design – Broward College

2014

CERTIFICATIONS

Azure AI Engineer Associate — Microsoft

2024

Interface Design Certificate — Shift Nudge

2022

Foundations of UX Design Certificate — Google

2021

Mobile Web Specialist Nanodegree — Udacity

2018
